

Invitation

MeteoSwiss User Consultation 2024

MET matters!

Thursday, 12 December 2024

Ladies and Gentlemen,

Bridging the gap between weather and flight operations is one of MeteoSwiss' most important tasks. Weather plays an overarching role in aviation, affecting many aspects of flight operations, from planning and routing to safety and efficiency.

The provision of MET (aeronautical meteorological) services focuses on the different needs both on the ground and in the air. As aviation activity continues to grow and evolve, so does the value and importance of MET. Additional and more detailed meteorological information is key in order to keep pace with the changing needs of aviation.

At this event, we will look at the complex relationship between weather and aviation, exploring the various meteorological factors that influence flights and how MET contributes to safe and efficient operation in ATM or leisure aviation.

We look forward to welcoming you and kindly ask that you register by 10 November 2024.

Yours sincerely

Markus Aebischer

Program

13:00	Reception – Welcome
13:30	Opening Speech
13:50	Presentations
15:00	Coffee Break
15:30	Presentations
16:20	Closing Speech
